

WHAT HAPPENS IN THERMAL RUNAWAY

1. The battery goes into a self-heating state.

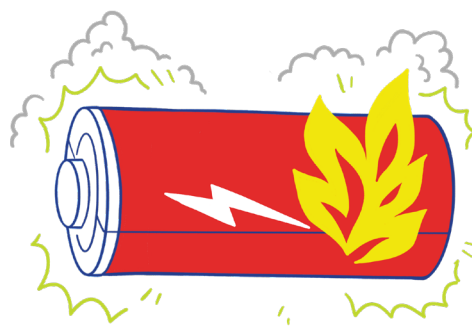

2. It generates heat faster than it can cool down.

3. Once it gets too hot, it reaches a state called **THERMAL RUNAWAY**.

4. This can lead to very high temperatures, smoke, or even fire.

What It Might Look Like

The battery feels hot.
It starts to change shape, color, and smell.
You see or smell smoke.

What You Can Do

Unplug the charger.
Turn it off.
Let it cool in a cool, dry place.
Tell a grown-up right away!
